

Coalition Support for USGS Streamgauge Networks and Modernization

Senator Jeff Merkley, Chair
Senator Lisa Murkowski, Ranking Member
Senate Appropriations Subcommittee on Interior, Environment & Related Agencies
131 Dirksen Senate Office Building
Washington, D.C. 20510

February 28, 2023

RE: WATER DATA & SCIENCE PROGRAM FUNDING
Interior Department Appropriations for FY2024

Summary of Coalition's Requests for FY2024:
Federal Priorities Streamgages = \$32.0 M
Cooperative Matching Funds Program = \$68M
(includes \$33M streamgauge support and studies)
NGWOS/data modernization = \$35M

Dear Chairman Merkley and Ranking Member Murkowski:

Our coalition of 96 water management and use stakeholders urges your support to sufficiently fund the United States Geological Survey's Federal Priorities Streamgauge network and supportive programs for the upcoming Fiscal Year 2024 budget appropriation.

A fully funded streamgauge network – one that keeps pace with inflationary and routine maintenance overhead – is critical to ensuring the nation's socioeconomic and cultural wellbeing. These streamgages are crucial as we embark on new efforts to understand, plan for, and build our collective capacity to improve the nation's resilience to extreme weather events. A summary of our funding request is detailed below. The final section of this letter explains in more detail why we as a nation simply cannot risk an inadequately funded network of streamgages.

Summary of funding request

Our broad coalition of state agencies, interstate commissions, associations, universities, non-governmental organizations, and private industry request a total USGS Fiscal Year 2024 budget appropriation. This request consists of **\$32M** dedicated to Federal Priorities Streamgages, **\$68M** for the Cooperative Matching Funds Program (including \$33M for streamgauge support) and **\$35M** for Next Generation Water Observing System and data delivery modernization.

Supporting details

Federal Priority Streamgages (FPS) -- \$32M

We envision the need for a \$2M increase over our FY2023 \$30M funding request which was designed to cover the costs of existing gages and preclude any loss of sites. This request does not include a cost-share takeover for any FPS gages; it is just to keep the current gages going.

Justification: Funding for FPS has been flat since 2016, yet operational costs have grown by approximately one to three percent per year due to increases in salary, travel, equipment and communication costs. Inflationary costs associated with streamgage site maintenance, operations and reporting have also generated a \$1M per year shortfall since 2022.

Cooperative Matching Funds (CMF) Program -- \$68M

The CMF program should be funded at \$68M to adequately support cooperative matching funds for streamgaging. Of that appropriation, \$33M for CMF-supported streamgages is needed to protect the approximately 5,275 CMF-supported streamgages that are already in place and functioning nationwide.

Justification: The USGS works with more than 1,400 partners nationwide (federal, state, tribal, local and non-governmental organizations) using CMF to jointly support streamgages. This matching program began as a 50/50 cost share but has seen the federal contribution decrease to less than 30 percent. When an increasing share of the streamgages must be funded by reimbursable and private parties, they become ever more susceptible to having the funding pulled, thus rendering the FPS program less stable overall.

Next Generation Water Observing System (NGWOS) - \$35M

Our coalition appreciates Congress' support of the Next Generation Water Observation System (NGWOS). We stand by last year's FY2023 request for \$35M to allow for further buildout of the NGWOS program. Funding at this level for FY2024 would complete rollout for the fifth Integrated Water Science (IWS) basin and ultimately move NGWOS toward the goal of 10 IWS basins nationwide.

Justification: The FY2023 appropriation of \$29.5M was only a \$500,000 increase over the FY2022 appropriation which allowed planning to begin in the fifth basin but with fewer resources than originally intended.

USGS Streamgage network data improve our resilience to extreme weather events

A fully funded and implemented streamgage network will augment our nation's resilience in response to extreme weather events. Without water data from this widespread system of sites, we are less equipped to make informed decision making, such as flood and hurricane risk predictions, drought determinations, and water supply forecasts.

The USGS recently completed an analysis of the USGS Streamflow Monitoring Network to determine priority areas to maintain or improve coverage, resolution, and representation throughout the United States.¹ This analysis identified network gaps in three important areas in context to building resilience to extreme weather events:

- 1) Most coastal watersheds (83 percent) do not have streamgages. More gages are needed in coastal areas; a robust streamgage network implemented in coastal areas would provide important data to reduce flood risk in context to sea level rise through improved flood forecasting and warning.
- 2) Thirty-nine states lack streamflow information in areas to assess how local climate is affecting floods and droughts. More streamgages are needed to understand how climate variability affects different parts of the Nation. The findings indicate that more gages are needed in 30 percent of NOAA Climate Divisions.
- 3) The USGS network has streamgages in many areas where water supply is vulnerable to reduced snowpack because of climate warming. Some of these areas may require additional gages because they are particularly vulnerable to changes in snowpack.

With your help and continued support, Congress can enable the USGS to fulfill its Water Resources Mission Area goals by adequately funding the Federal Priority Streamgages network, Cooperative Matching Funds program, and NGWOS to move water science into the 21st century.

We are happy to answer your questions or provide any additional information. Please contact any of us or Beth Callaway at the Interstate Council on Water Policy at: beth@icwp.org or (307) 772-1999.

Wyoming Water Development Office	Jason Mead	Interim Director
Xylem Analytics	Randy Hadland	Senior Manager
Yellowstone River Compact Commission	Brandon Gebhart	Commissioner

Additional information:

The SECURE Water Act of 2009 authorized implementation of not less than 4,700 streamgage sites funded by the national streamflow information program. The total cost of a fully implemented network would have required \$130M initially and \$80M for ongoing operations and maintenance.

To-date, Congressional streamgage funding priorities have not lined up to meet this goal. The USGS is unable to complete its development for a fully implemented network as directed by Congress in 2009 without additional funding.

Why are Federal Priority Streamgage (FPS) gage data important?

Authorized by Congress in the SECURE Water Act as the National Streamflow Information Program, the FPS is meant to comprise a stable “federal backbone” network of streamgages. Data provided by FPS inform critical life and property saving information. They augment research management decisions, maintain water dependent infrastructure and provide essential public health and environmental condition information. Insufficient funding seriously compromises our national ability to address federal, state, tribal, local socioeconomic issues, including international treaty obligations.

Who uses the data and for what purpose?

State/local/tribal stakeholders: The members of our undersigned organizations rely on these streamgaging networks to ensure our national ability to address critical environmental and socio-economic issues such as:

- Forecasting extreme stream flow and water level events such as floods, droughts, and hurricanes;
- Conducting longer-term climate resilience planning such as coastal flood risk and snowpack drought;
- Performing infrastructure design, operations and capacity for facilities such as roads, bridges, high-rises, dams and coastal development;
- Meeting municipal, public and private water supply needs;
- Completing temperature and other water-quality related assessments of major rivers, lakes, reservoirs and estuaries, and other wetlands;
- Conducting energy generation and exploration;
- Oversight and implementation of many federal laws such as the SECURE Water Act, Clean Water Act, Safe Drinking Water Act, and Endangered Species Act;
- Compliance and implementation of interstate and international compacts, court decrees, and treaties;
- Determining environmental impacts to disadvantaged communities;

- mitigating environmental impacts to disadvantaged communities;
- Balancing competing consumptive water uses with instream flows and water level needs that are essential for sustaining aquatic, riparian and terrestrial ecosystems.

Federal stakeholders: The vital data provided by the streamgages support critical water management activities across the nation by carrying out the mission and operations of federal agencies such as the U.S. Army Corps of Engineers, NOAA, FEMA, EPA, USDA, Department of Interior, NASA, Department of Defense, Homeland Security, and others.

The utility of the network is not singular to USGS -- a recent survey conducted by the agency of 28 sister federal agencies solicited input on the importance and prioritization needs of streamgage information. The results from this survey will be shared this spring; USGS will adapt the FPS program to federal priorities to meet the responses of the survey.

Why is there a current FPS funding shortfall?

Federal Priority Streamgages: Historically, FPS cost increases have previously been covered by USGS partners, including state and other federal agencies (where gages are jointly funded) or by delaying planned network enhancements. Enhancements include, but are not limited to, cyclical upgrades to equipment and activities to flood-harden existing FPS sites.

Unfortunately, after multiple years of flat funding, the USGS reached a breaking where network enhancements could no longer be delayed and operational costs continue to increase. Operations at some streamgages have already been discontinued and more shutdowns will continue into the future unless funding shortages are addressed resulting in losses to long-term data that cannot be re-created.
